Name: \_\_\_\_\_ Recitation Instructor: \_\_\_\_\_

A bowling ball is suspended from the ceiling using a light string. While the string is taut, the ball is pulled back so that the string makes an angle of  $\theta = 6.5^\circ$  with respect to the vertical, and then the ball is released from rest. The resulting period of oscillation is  $T = 3.3\text{ s}$ . What is the speed of the bowling ball at the bottom of its swing? For the limit check, investigate what happens to the ball's speed at the bottom if it is barely pulled back at all before being released ( $\theta \rightarrow 0$ ).

Symbolic Answer:

Units Check

Limits Check

a) As  $\theta \rightarrow 0$ , what limit does  $v$  approach?

b) Why does the result make physical sense?

Numerical Answer: (Obtain this by plugging numbers into your symbolic answer.)
